

## Caruna, 110kV/20kV substation interface to web (IoT)

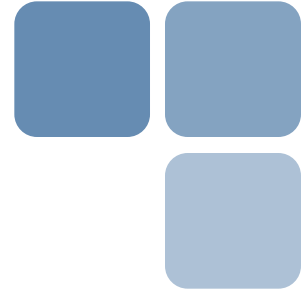

Wireless and wired fast web interface to grid substation devices like safety relays

Remote configuring and management of control devices in distributed substations.

Klinkmann customer

### Solution:

- eWON IoT routers (Internet of Things).

### Benefits:

- Easy and fast interface to the existing metering and automation systems . Optimize total investments.
- The most optimal communication to each object: mobile network, optical/cable network etc. Flexible user interface.
- No need to make service visits to remote objects any more. The best experts can work remotely.
- Good Eco System of Project engineering companies making projects.
- Easy version management.
