

Tehstroy/Taganrog (Rostovskaya region)

Supplying machines and services to railway vehicles.

In railway applications, there is much remote operations. Needed much flexibility when using the machines.

Solution:

- EWON routers for remote monitoring and service.

Benefits to customer:

- The machines can be monitored and given service in exact locations where they are in each time.
- Remote monitoring of machines with existing Siemens and other controllers.
- Remote and predictive maintenance.
- Faster and more reliable service to the machine users, remote operator guidance.

Geographically remotely located machines and service places can be managed centrally for the best productivity.
